## Bioavailable Starter Supplement For Growing Horse

The nutritional requirements of horses change as they progress from foalhood to physical maturity. During the first few months of life, foals grow rapidly. Though mare's milk is usually a sufficient diet for the first three months of life, milk feed alone can not provide sufficient nutrients.

Directly after their birth many foals have a serious deficiency of vitamins, minerals & trace elements. Milk feed alone can not provide sufficient nutrients.

First & foremost, the foal needs certain substances to efficiently process its food. The rearing target is to efficiently convert all the nutrients eaten by the foal, in to growth. Inorganic minerals due to their poor bioavailability are not completely absorbed. So, the need for bioavailable starter supplement for foals was felt, which resulted in biotechnology innovation called, AVISHI BOOM !

### Benefits:

- Specific nutrients required for the growth of a young horse are provided in bio-available form
- Better teeth & bone development
- Better muscle development
- Helps to combat stress situation
- Builds immunity of young horses

**Method of application:** Mix in water or feed.

Weanling Stage (4 to 12 months old): 5 ml per day per foal, 7 days in a month.

### Composition:

Calcium, Phosphorus, Copper and Zinc in bio-available form along with protein source.

Manufactured by :

Avishi Biosciences Pvt. Ltd.

Marketed by :

**Arya Biotechnologies**
